

ADAPTACUT Conduit Cutter

The new innovative cutting tool from Adaptaflex that quickly cuts through rigid or flexible conduit.

Currently available in two designs and two sizes, adaptacut rigid in 20mm and 25mm diameter options and adaptacut flexible in 21mm and 28mm diameter options, so as to suit the most popular ranges of rigid and flexible conduit systems on the market today.

Specifically engineered to allow for easy cutting of rigid PVC and flexible nylon conduit, adaptacut is a simple, single handed, quick and easy cutting tool for all electricians and installation engineers.

The clever compact design means that it is light, fits easily in a toolbox and is simple to use, whilst the unique finger guard ensures that there is no unnecessary risk to the user.

Safe and professional, the device fits directly and comfortably around the conduit pipe, making it ideal for use in confined spaces. With a firm grip and 1-2 simple rotations, the adaptacut will produce an effortless clean cut, time and time again without damaging the conduit.

Adaptacut can also be used, equally successfully, to cut rigid PVC conduit pipe, including MDPE, PE, PP, HEP20, and P-EX. The innovative product will provide a neat square cut, without the need for hacksaws or shears.

Key Product Features:

- Quick and easy to use
- No need for hacksaw or shears
- Cuts conduit clean and square
- Ideal for use in confined spaces
- Significantly helps reduce installation times
- Fits easily in a toolbox
